EU citizen • Open to international relocation

PROFESSIONAL SUMMARY

Engineer with a bachelor's degree in Computer and Electronic Engineering and an international double master's degree in Artificial Intelligence and Cybersecurity. Strong Python software development background, with hands-on experience in deep learning, symbolic AI, automated planning, and constraint optimization.

TECHNICAL SKILLS

Programming & Data: Python, R, SQL

Machine Learning: TensorFlow/Keras, deep learning, MLPs, CNNs, model training & evaluation

Generative AI: structured prompting, multimodal workflows, human-in-the-loop evaluation

Symbolic AI & Optimisation: Answer Set Programming, Clingo, automated planning, PDDL, MiniZinc, constraint optimisation

Methods & Tools: data processing, statistical analysis, simulation, reproducible experiments, Git, Docker

SELECTED AI PROJECTS

Deep Learning for Side-Channel Profiling

Individual academic project - Python, TensorFlow/Keras, ASCAD v1, MLP, CNN

- Implemented and trained Multi-Layer Perceptron (MLP) and Convolutional Neural Network (CNN) profiling models on ASCAD v1, processing 700-sample side-channel traces and evaluating aligned and desynchronised inputs.
- Compared feature windows, epochs, and batch sizes through rank-based key-recovery experiments; achieved key rank 0 for the target byte, while the best MLP configuration recovered up to 4 of 16 bytes in the evaluated project setup.

AI-Assisted Game Design and Simulation - Il Patto del Bosco

Individual academic project - Python, Generative AI, prompt engineering, simulation

- Developed a tested Python simulator for an asymmetric card game, running reproducible 10,000-game experiments across 2–4 player configurations to analyse win rates and elimination modes; used structured multimodal Generative AI workflows to iteratively refine rules and visual assets.

Smart Elevator Control with Answer Set Programming

Individual academic project - ASP, Clingo, automated planning

- Modelled a multi-elevator planning problem and implemented single-shot and multi-shot Clingo encodings across five instances, using incremental base, step, and check programs to support evolving requests.

PROFESSIONAL EXPERIENCE

Automation & DevOps Intern - InfoFactory S.r.l.

Udine, Italy

Master's internship

Mar 2026 – Apr 2026

- Developed and published a TypeScript n8n community node for Pumble, implementing reusable REST API operations, credential handling, testing, and technical documentation for the public GitHub and npm package.
- Prototyped n8n workflows integrating business software, external APIs, and AI-assisted content-processing services, with Docker-based self-hosted environments used for development and validation.

Data & Software Engineering Intern - Planeat / Alimentiamoci S.r.l.

Pavia / Milan, Italy

Bachelor's internship and thesis project

Dec 2022 – May 2023

- Built a Python pipeline to acquire, normalise, and structure recipe and ingredient data, then compared six fuzzy-matching methods and manually validated approximately 1,000 candidate pairs.

EDUCATION

Double-Degree in Artificial Intelligence & Cybersecurity

Jul 2026

University of Udine, Italy • University of Klagenfurt, Austria

Bachelor's Degree in Computer and Electronic Engineering

2023

University of Pavia, Italy
