Professional Summary

Engineer with a bachelor's degree in Computer and Electronic Engineering and an international double master's degree in Artificial Intelligence and Cybersecurity. Hands-on experience in Solidity and Foundry, Solana token scripting, and Web3 product development, including contributions to an award-winning ETHGlobal prototype and the launch of a sold-out 400-item NFT collection.

Technical Skills

Languages: Solidity (project experience), TypeScript, Python

Blockchain: Ethereum/EVM, Solana, SPL tokens, NFTs, DeFi concepts

Development: Foundry, smart-contract testing fundamentals, wallet integration, REST API integration

Tools & Web3 Product: Git, GitHub, Docker, Linux, tokenomics, DApp prototyping

Relevant Web3 Experience

Web3 Project Lead & Product Consultant — Dolly Noire S.r.l.

Milan, Italy

Occasional external collaboration

Sep 2021 – Mar 2023

- Conceived and proposed Cyberdecks to Dolly Noire, defining the business case, NFT utility, tokenomics, MVP scope, and launch strategy for the streetwear brand's entry into Web3.
- Directed the project and coordinated delivery with company founders and the developer who designed and implemented the Java art engine used to generate the collection from brand-provided designs.
- Supported the launch of a 400-item NFT collection that sold out and generated approximately 9 ETH in 2022 trading volume.

Selected Blockchain Projects

Bestliz - SportFi Platform

Four-person international hackathon project - ETHGlobal London 2024, Chiliz Chain

- Defined the product concept, lossless match-vault logic, tokenomics, frontend flows, and pitch within a four-person international team; the project won second place in Chiliz Fan Utility Projects and a Chiliz Pool Prize.

Solana SPL Token Automation

Individual MasterZ learning project - TypeScript, Solana Devnet, @solana/web3.js, @solana/spl-token

- Built sequential TypeScript scripts to generate keypairs, request Devnet SOL, initialise a mint account, create an Associated Token Account, mint 1,000 SPL tokens, and transfer tokens between wallets.

DataMinder - DeSci Data Ownership Platform

Three-person MasterZ team prototype - Solana, React/Next.js, wallet integration, encryption

- Contributed to frontend, authentication, encryption and key-management concepts, Solana wallet integration, NFT access logic, and business planning for a prototype enabling consent-based sharing of sensitive research and healthcare data.

Additional Professional Experience

Automation & DevOps Intern — InfoFactory S.r.l.

Udine, Italy

Master's internship

Mar 2026 – Apr 2026

- Developed and published a TypeScript integration package for Pumble as an n8n community node (GitHub / npm), covering REST API operations for messaging, channels, users, groups, threads, and bots.
- Structured the package into reusable resources and operations, implemented credential handling, validated API behaviour, and documented installation, configuration, and usage.

Education

International Double Degree in Artificial Intelligence & Cybersecurity

Jul 2026

University of Udine, Italy • University of Klagenfurt, Austria

Bachelor's Degree in Computer and Electronic Engineering

2023

University of Pavia, Italy

Training & Languages

MasterZ - Blockchain & Digital Assets Programme: Certificate of Completion, Mar 2024

Italian: Native • **English:** Professional working proficiency (Cambridge B2 First)
